

A year ago, when WHO declared COVID-19 outbreak a pandemic, countries in WHO South-East Asia Region were either responding to their first cases of importation or cluster of cases or keeping a strict vigil against importation of the new coronavirus.

The following months were unprecedented, and for many reasons. Scientists, experts, governments, societies, communities and even individuals responded to the new virus with urgency and measures never witnessed before.

### **Metadata:**

ID: Unique Identifier

Country: Name of Country

TotalCases: Total Number of cases recorded so far

TotalDeaths: Total Deaths recorded so far

TotalRecovered: How many people survived

ActiveCases: Number of people who currently has the virus

TotalCasesPerMillion: How many cases are recorded per million individual

TotalDeathsPerMillion: How many deaths recorded per million individual

TotalTests: Total number of COVID19 tests conducted RTPCR + RAT + any other tests

TotalTestsPerMillion: How many tests were conducted per million individual

TotalPopulation: Population of the country
